

# Achieving Zero Waste: Saahas Zero Waste's Comprehensive Waste Management at IPL

IPL matches in Bengaluru generate massive amounts of waste, contributing to the city's already overwhelming 4500MT/day of municipal solid waste, much of this waste ends up in landfills or is illegally dumped.

Saahas Zero Waste provided sustainable waste management solutions for IPL matches, ensuring proper handling and reducing environmental impact.

## Here's SZW's 4-Step Process:

# 01

### DEPLOYING FIELD STAFF & VOLUNTEERS

A team of 30, including 27 volunteers and 3 field staff, ensured effective waste management on match days. Volunteers guided the crowd in dropping off waste in the right bins.

# 02

### IDENTIFYING WASTE-GENERATING POINTS

We strategically placed bins with clear signage for wet and dry waste at key locations, helping spectators segregate their waste accurately.

# 03

### EFFICIENT WASTE COLLECTION

All waste from the stands were collected and brought to the waste management unit by our housekeeping team for processing.

# 04

### SEGREGATION & RESOURCE RECOVERY

Our field staff meticulously sorted the waste into dry and wet, ensuring maximum resource recovery and transportation to respective end destinations for recycling/co-processing.
